

MORTE ARTIFICIAL: PRECARIEDADE É TUDO QUE VOCÊ PRECISA

Proposta:

Paulo Roberto

Banca:

Creto Vidal, Gilvan Maia, Joaquim Bento, Yuri Lenon

UNIVERSIDADE
FEDERAL DO CEARÁ

DEPARTAMENTO
DE COMPUTAÇÃO

Aprendizado por Reforço

Objetivo: Maximizar o retorno **G**

$$G_t = \lambda^0 R_t + \lambda^1 R_{t+1} + \lambda^2 R_{t+2} + \dots$$

Ambiente: VizDOOM Health-Gathering

Observação e Pré-Processamento

RGB 320X240

Escala de Cinza

161x161 + normalização [0,1]

Ação

Agente: PPO o Algoritmo de Aprendizado

Line Search

Trust Region

Recompensa: O impositor de Comportamento

“um agente autônomo é um sistema situado dentro de um ambiente e que constitui parte dele, que percebe esse ambiente e atua sobre ele ao longo do tempo, **perseguindo sua própria agenda** e de forma a afetar o que perceberá no futuro”

Vida(Autopoieses) e Adaptatividade

Adaptatividade

Precariedade: O Catalisador da Inteligência

Glaucoma como Precariedade Artificial

Frame 0

Frame 1

Frame 20

Frame 50

Recompensa Intrínseca e Curiosidade

$$r_t = r_t^{\text{ext}} + r_t^{\text{int}}$$

Motivação Intrínseca:

Realização de uma atividade por seu valor inerente

Motivação extrínseca:

Realização de uma atividade como meio para atingir um objetivo externo

Curiosidade: Tendência em buscar experiências que revelem limitações em seu conhecimento atual, busca estados que são difíceis de prever ou que diferem significativamente da experiência prévia do agente tornam-se mais atrativos.

Transformando Precariedade em Recompensa com RND

- 
- A faint, light blue wireframe illustration of a crab is positioned in the background on the right side of the slide. The crab is shown from a side profile, facing left, with its legs and claws visible. The wireframe consists of a grid of lines that define the shape of the crab's body and appendages.
